

THE KENYA HIGH SCHOOL ALUMNAE SOCIETY

Your Career Guide

Boma Career Day 2026 · Mentorship Edition

SATURDAY 29 AUGUST 2026

Servire Est Regnare

TO SERVE IS TO REIGN

WELCOME

Before You Choose, Read This

A message from the WG2 Mentors team.

On 29 August, 1,246 of you — every Form 4 and Grade 10 student — will spend a full day sitting across from women who once sat exactly where you're sitting now: in a Kenya High classroom, unsure what came next.

They are now doctors and surgeons, engineers and pilots, judges and journalists, founders and financiers, farmers and architects, artists and diplomats. On Career Day, they come back — not to lecture, but to talk to you directly, in small rooms, about what their careers actually look like day to day.

This guide is your map. It lays out **23 career clusters**, grouped into **5 Zones**, covering well over a hundred specific careers — with the room where each one lives, and a short story about why it matters. Use it to find the careers you already know you love, and to discover a few you've never even heard of.

You don't have to choose just one. You'll get up to four mentorship rounds in a single day — so explore boldly.

*With excitement for what you'll discover,
WG2 — Mentors, Careers & Mentorship Programme*

HOW TO USE THIS GUIDE

Find Your Room in Five Minutes

Not sure where to start? Match your vibe to a Zone below, then flip to that section. Know exactly what you want? Skip straight to the A–Z Career Index at the back.

Zone A — Health, Medicine & Human Performance

You care for people, ask “why” about the body, and want to heal, treat, or protect health.

Zone B — STEM, Engineering, Earth & Life Sciences

You love figuring out how things work — through logic, numbers, machines, or nature itself.

Zone C — Business, Finance, Trade & Leadership

You think in strategy and numbers, and you're already asking how to make things grow.

Zone D — Law, Governance, Public Service & Faith

You care about justice, service, leadership, and doing right by your community.

Zone E — Creative Industries, Media, Hospitality & Built Environment

You express yourself through stories, design, image, food, or building the world around you.

HOW TO SIGN UP

How To Get There

- 1 Get the sign-up form from your class teacher.**
Pre-registration opens **15 August** and closes **20 August**.
- 2 Rank your top 6 clusters.**
Put the ones that excite you most first — this guide is exhaustive, so take your time browsing before you rank.
- 3 You'll be placed into up to 4 mentorship rounds.**
Each round is in a different room, so you can explore more than one path in a single day.

4

Collect your Itinerary Card and wristband in class.

Given out by **27 August** — two days before Career Day. It has your Rounds, Rooms, and a QR code. Keep it safe!

5

On the day, follow your card.

Go to the room listed for each round. Your Cluster Sub-Lead will scan you in at the door.

6

Didn't pre-register?

No problem — a same-day sign-up desk will place you into rooms that still have space.

Health, Medicine & Human Performance

“You care for people, ask “why” about the body, and want to heal, treat, or protect health.”

A1 Medical Practitioners

A2 Public Health & Psychosocial Services

A3 Sports Science & Physical Fitness

ROOM
A1

Medical Practitioners

The healers, diagnosticians, and surgeons who keep bodies and communities well.

WHY IT MATTERS

Every year, Kenyan-trained doctors run mobile clinics in places an ambulance can't reach, and Kenyan surgeons perform procedures once only available abroad. If you're the girl who patches up her hockey team's scraped knees, asks why a fever spikes at night, or begs to re-watch the medical dramas — this room is where that curiosity turns into a scalpel, a stethoscope, or a lab coat.

CAREER	WHAT YOU WOULD ACTUALLY DO
Physicians	Diagnose and treat illness across every stage of life.
Surgeons	Operate to repair, remove, or reconstruct — from trauma to transplants.
Dentists	Protect smiles, from fillings to full oral reconstructive care.
Pharmacists	The medicine experts who make sure every prescription is safe and effective.
Nurses	The frontline of patient care, present at every hospital's most critical moments.
Physiotherapists	Rebuild movement and strength after injury, surgery, or illness.
Veterinary Practitioners	Medicine for animals — from family pets to livestock and wildlife.

Public Health & Psychosocial Services

The professionals who protect entire communities, not just one patient at a time.

WHY IT MATTERS

A single vaccination campaign can protect an entire county before an outbreak even starts. A single counsellor can be the reason a classmate makes it through a hard year. This cluster is for the girl who thinks in systems — who wants to fix the why behind the illness, not just the illness itself.

CAREER	WHAT YOU WOULD ACTUALLY DO
Clinical Psychology	Diagnose and treat mental health conditions through therapy.
Social Services	Support vulnerable individuals and families to access care and stability.
Primary Healthcare	Frontline community health services — the first stop for most patients.
Mental Health Counselling	Guide people through trauma, anxiety, and life's hardest seasons.
Epidemiology	Track and stop the spread of disease across populations.
Community Health	Design and run health programmes at the grassroots level.
Environmental Health	Protect public health from unsafe water, air, and sanitation.

Sports Science & Physical Fitness

For the athletes, coaches, and strategists who turn talent into champions.

WHY IT MATTERS

Kenya's name is stitched into world athletics record books — and behind every medal is a coach who spotted the talent, a physiotherapist who kept the body strong, and a sports scientist who found the extra half-second. If PE is your favourite period and you already know your personal best, this is your zone.

CAREER

WHAT YOU WOULD ACTUALLY DO

PE & Sport Pedagogy

Teach and coach the next generation of athletes.

Coaching

Train individuals or teams to reach peak competitive performance.

Sports Therapy

Prevent and treat injuries specific to athletes.

Health & Fitness Science

Design evidence-based training and wellness programmes.

Sports Management

Run clubs, federations, and major sporting events.

Sports Journalism

Report, analyse, and broadcast the stories behind the game.

Sports Agents & Scouting

Discover talent and negotiate athletes' careers.

B

STEM, Engineering, Earth & Life Sciences

“You love figuring out how things work — through logic, numbers, machines, or nature itself.”

B1	Computing, Data & Cyber Sciences
B2	Engineering & Manufacturing
B3	Earth Sciences, Energy & Mining
B4	Environment & Conservation
B5	Agriculture, Food & Agribusiness
B6	Aviation, Aerospace & Maritime

ROOM
B1

Computing, Data & Cyber Sciences

The builders of apps, algorithms, and the systems that run modern life — and its defences.

WHY IT MATTERS

Every M-PESA transaction, every ride-hailing app, every exam portal runs on code someone wrote and data someone secured. Nairobi is already one of Africa's fastest-growing tech hubs — and the next founder, AI researcher, or cybersecurity expert stopping a breach in real time could be sitting in this room.

CAREER	WHAT YOU WOULD ACTUALLY DO
Computer Science	Build the software and systems behind every app and platform.
IT & Informatics	Keep organisations' technology running, secure, and up to date.
IT Service Management	Manage how technology is delivered and supported at scale.
Cyber Security	Defend networks, data, and people from digital attacks.
AI & Machine Learning	Teach machines to recognise patterns and make decisions.
Data Science	Turn raw data into insight that drives real decisions.
Applied Mathematics	The logic engine behind engineering, finance, and computing.
Statistics	Make sense of uncertainty — from research to national policy.
Industrial Design	Design the physical products people use every day.

ROOM

B2

Engineering & Manufacturing

From circuits to factory floors — the engineers who design and build what the world runs on.

WHY IT MATTERS

Somebody engineered the phone in your pocket, the prosthetic limb that gave someone their stride back, and the assembly line that makes it all possible at scale. Engineering remains one of the fields where women are most underrepresented globally — which also makes it one of the fields where your voice is most needed.

CAREER

WHAT YOU WOULD ACTUALLY DO

Electrical Engineering

Design the systems that generate, distribute, and use power.

Mechatronics

Blend mechanical, electrical, and software engineering into smart machines.

Mechanical Engineering

Design and build machines, engines, and mechanical systems.

Biomedical Engineering

Engineer the devices and technology that save lives in medicine.

Manufacturing & Industrial Engineering

Design and optimise how products get made at scale.

ROOM

B3

Earth Sciences, Energy & Mining

The scientists reading the planet itself — and powering the future responsibly.

WHY IT MATTERS

Kenya sits on the Great Rift Valley, one of the most geologically active places on Earth — which is exactly why it's also a global leader in geothermal energy. Somebody has to find where the earth holds resources, and decide how to use them without wrecking what's above ground. That's this room.

CAREER

WHAT YOU WOULD ACTUALLY DO

Geoscience

Study the Earth's structure to locate resources and understand natural hazards.

Energy (Power & Renewables)

Generate and distribute the power that runs everything else.

Mining & Extractives

Responsibly locate and extract the minerals modern life depends on.

ROOM
B4

Environment & Conservation

The guardians of wildlife, climate, and the natural systems we all depend on.

WHY IT MATTERS

Kenya's national parks shelter some of the last great migrations on Earth — and every one of them needs scientists, rangers, and planners fighting climate change and habitat loss to keep it that way. If you've ever cried at a documentary about elephants, this is where that feeling becomes a career.

CAREER

WHAT YOU WOULD ACTUALLY DO

Climate Change	Research and respond to one of the defining challenges of our time.
Wildlife Management	Protect and manage Kenya's iconic wildlife populations.
Environmental Conservation	Preserve ecosystems and biodiversity for future generations.
Eco-Planning	Design land use and development that protects the environment.
Waste Management	Build the systems that keep waste out of land, air, and water.
Environmental Journalism	Tell the stories that hold polluters accountable and inspire change.

ROOM
B5

Agriculture, Food & Agribusiness

From the farm to the table — feeding a growing continent, scientifically and profitably.

WHY IT MATTERS

Agriculture still employs more Kenyans than any other sector — and it's being transformed by science: drought-resistant crops, precision irrigation, and agribusinesses turning smallholder farms into export brands. This isn't just about farming — it's food security for an entire continent.

CAREER

WHAT YOU WOULD ACTUALLY DO

Agronomy & Crop Science	Improve how crops are grown, bred, and protected.
Animal Husbandry	Raise and care for livestock for food, income, and export.
Fisheries & Aquaculture	Farm and manage fish stocks sustainably.
Agricultural Engineering	Design the machinery and systems that modernise farming.
Eco-Agriculture	Farm in ways that protect soil, water, and biodiversity.
Agribusiness & Value Addition	Turn raw produce into branded, exportable products.

Aviation, Aerospace & Maritime

For the ones who look up — and the ones who keep the world moving by sea.

WHY IT MATTERS

Somebody has to fly the plane — but somebody also has to design it, dispatch it, maintain its engines, and guide it safely through the sky, while an entirely different set of experts keeps ships and cargo moving across the world's oceans. It's one of the most tightly-run teams in any industry.

CAREER	WHAT YOU WOULD ACTUALLY DO
Pilots	Fly commercial, cargo, or private aircraft.
Flight Dispatch & Air Traffic Control	Keep every aircraft safely on course and on time.
Cabin Crew	Ensure passenger safety and service in the air.
Aerospace Engineering	Design the aircraft and spacecraft of the future.
Drone Operations	Fly and manage drones for mapping, delivery, and inspection.
Airport Management	Run the operations behind a functioning airport.
Aircraft Maintenance Engineering	Keep aircraft safe and airworthy.
Maritime & Shipping	Manage vessels, ports, and global cargo trade by sea.

Business, Finance, Trade & Leadership

“You think in strategy and numbers, and you're already asking how to make things grow.”

C1	Finance & Actuarial Sciences
C2	Entrepreneurship & Innovation
C3	Leadership & Strategic/HR Management
C4	Supply Chain, Logistics & Procurement
C5	Marketing, PR, Sales, Comms & CX

Finance & Actuarial Sciences

The number-driven minds who make money — and risk — make sense.

WHY IT MATTERS

Every insurance payout, every investment fund, every bank loan is underwritten by someone who ran the numbers and decided it was safe. Actuaries are consistently ranked among the best-paying, most in-demand careers worldwide — and it starts with loving maths enough to bet on it.

CAREER	WHAT YOU WOULD ACTUALLY DO
Financial Engineering	Design complex financial products and investment strategies.
Financial Analysis	Evaluate companies and markets to guide investment decisions.
Banking	Manage how money moves — from personal accounts to national economies.
Accountancy	Track, audit, and report the financial health of any organisation.
Investments	Grow wealth by allocating capital into markets and assets.
Auditing	Independently verify that financial records are accurate and honest.
Insurance	Price and manage risk so individuals and businesses are protected.
Actuarial Science	Use statistics and maths to price risk and secure the future.

ROOM

C2

Entrepreneurship & Innovation

For the girl already running a side hustle — and the future founders of Kenya's next big thing.

WHY IT MATTERS

Kenya is called the 'Silicon Savannah' for a reason — from mobile money to agri-tech, homegrown startups are solving homegrown problems and going global. If you've ever looked at a problem and thought 'I could build something for that,' this room is full of people who did exactly that.

CAREER

WHAT YOU WOULD ACTUALLY DO

Startup Founder	Build a business from an idea to a functioning company.
Incubators & Accelerators	Support and fund early-stage startups to grow fast.
Seed Investing	Provide the first capital that gets new ideas off the ground.
Innovation Management	Lead how established organisations create and adopt new ideas.

ROOM

C3

Leadership & Strategic/HR Management

The people who build the teams and systems behind every organisation that works.

WHY IT MATTERS

Behind every company that runs smoothly is someone who hired the right people, built the right culture, and made the hard calls when things needed to change. Leadership isn't a title you're given — it's a skill you build, and this is where you start building it deliberately.

CAREER

WHAT YOU WOULD ACTUALLY DO

Institutional Strengthening	Build stronger, more effective organisations from the inside.
Business Development	Grow organisations by finding and securing new opportunities.
Human Resources	Recruit, support, and develop an organisation's people.
Talent Acquisition	Find and attract the right people for the right roles.
Administration	Keep organisations running efficiently, day to day.
Change Management	Guide organisations through major transitions successfully.

**ROOM
C4**

Supply Chain, Logistics & Procurement

The invisible network that gets every product from factory to shelf, on time.

WHY IT MATTERS

When a shop shelf is full, it's because a supply chain professional planned it three months in advance. This field barely existed as a named career path a decade ago — now it's one of the most in-demand skill sets in global business, and Kenya's role as a regional trade hub makes it especially valuable here.

CAREER

WHAT YOU WOULD ACTUALLY DO

Supply Chain Management	Design and run the end-to-end flow of goods.
Logistics	Plan and coordinate how goods move efficiently across distances.
Procurement	Source and negotiate the goods and services organisations need.
Warehousing	Manage the storage and distribution hubs that keep supply moving.
Distribution	Get finished products to the right place, on time.

**ROOM
C5**

Marketing, PR, Sales, Comms & CX

The storytellers and strategists who connect brands with the people who need them.

WHY IT MATTERS

A great product with no story doesn't sell — and a great story, told right, can turn a small idea into a household name. This is the field for anyone who's ever convinced a group chat to try something new, just by how they described it.

CAREER

WHAT YOU WOULD ACTUALLY DO

Advertising	Create the campaigns that make brands unforgettable.
Branding	Shape how an organisation looks, sounds, and feels to the world.
Communications	Manage how organisations speak to the public and the press.
Customer Experience (CX)	Design every touchpoint a customer has with a brand.
Market Development	Identify and grow new markets for products and services.
Corporate Social Responsibility	Lead how businesses give back and act responsibly.
Sales Process Engineering	Design the systems that turn interest into revenue.

D

Law, Governance, Public Service & Faith

“You care about justice, service, leadership, and doing right by your community.”

D1	Legal Practitioners
-----------	---------------------

D2	Int'l Relations, Development & Governance
-----------	---

D3	Uniformed & National Security Services
-----------	--

D4	Theology & Pastoral Care
-----------	--------------------------

D5	Education
-----------	-----------

ROOM
D1

Legal Practitioners

The advocates, judges, and legal minds who uphold justice and the rule of law.

WHY IT MATTERS

Every contract, every constitutional right, every case that makes the evening news runs through someone trained in law. Kenya has produced some of the continent's most formidable legal minds — judges who've shaped case law, advocates who've won landmark rights cases. It starts with an argument you refuse to lose.

CAREER	WHAT YOU WOULD ACTUALLY DO
Legal Scholarship	Research and shape how the law itself develops.
Advocacy (Attorneys)	Represent clients and argue cases in court.
Judiciary	Interpret the law and deliver rulings as a judge.
Paralegal Work	Support legal teams with research and case preparation.
Notary Services	Certify and authenticate legal documents.
Mediation	Resolve disputes outside the courtroom, fairly and efficiently.
Prosecution	Represent the state in criminal cases.
Judicial Administration	Keep the machinery of courts and justice running.

Int'l Relations, Development & Governance

The diplomats and policy minds shaping how nations and communities work together.

WHY IT MATTERS

Someone negotiates the trade deals, drafts the policy that changes how a whole country delivers services, and sits at the table when nations decide how to work together. This is a field for the girl who reads the news and already has opinions on how it should have gone.

CAREER

WHAT YOU WOULD ACTUALLY DO

Policy Development

Design the rules and frameworks that shape public life.

Public Participation

Ensure citizens have a real voice in governance decisions.

Civic Education

Teach communities how to engage with democracy and their rights.

NGO & Foundation Work

Lead programmes that address social and humanitarian needs.

Diplomacy

Represent your country's interests on the world stage.

Think Tank Research

Shape policy debates through rigorous, independent research.

Conference Interpretation

Enable real-time communication across languages at the highest levels.

ROOM
D3

Uniformed & National Security Services

★ NEW FOR 2026

The protectors of the nation, its borders, and its people.

WHY IT MATTERS

From the officer who runs toward danger to the strategist planning national defence, uniformed services need sharp minds as much as they need courage. Kenyan women serve at every rank across the KDF, police, and prisons services today — proof that this path is open, and needed.

CAREER

WHAT YOU WOULD ACTUALLY DO

Kenya Defence Forces (KDF)	Serve and lead in the nation's armed forces.
National Police Service	Protect communities and enforce the law.
Kenya Prisons Service	Manage correctional facilities and support rehabilitation.
National Youth Service (NYS)	Lead national service and youth development programmes.
Immigration Services	Manage the nation's borders and citizenship processes.
Coast Guard	Protect Kenya's waters, ports, and maritime borders.

ROOM
D4

Theology & Pastoral Care

For those called to guide others' faith, spirit, and community life.

WHY IT MATTERS

Every congregation, chaplaincy, and community in crisis needs someone trained to hold space for people's deepest questions and hardest moments. It's a calling that combines scholarship, counselling, and quiet, steady leadership.

CAREER

WHAT YOU WOULD ACTUALLY DO

Theology	Study and teach the foundations of faith and belief.
Pastoral Studies	Train formally for religious and spiritual leadership.
Pastoral Care	Provide spiritual and emotional support to individuals and communities.
Spiritual Ministry	Lead worship, congregations, and faith communities.

Education

The teachers and education leaders shaping every generation that follows.

WHY IT MATTERS

You are, right now, sitting in the result of someone's decision to become a teacher. Every professional in every other room in this guide was taught by someone first. Education is the one career that multiplies itself, generation after generation.

CAREER	WHAT YOU WOULD ACTUALLY DO
Early Childhood Education	Shape the earliest, most formative years of learning.
Primary Education	Teach and guide the foundational school years.
Secondary Education	Teach and mentor teenagers through their most pivotal years.
Home Education	Design and deliver individualised, at-home learning.
Special Needs Education	Teach and advocate for learners with diverse needs.
TVET (Technical & Vocational)	Teach practical, hands-on trade and technical skills.
Tertiary & Academia	Teach, research, and lead at the university level.

Creative Industries, Media, Hospitality & Built Environment

*"You express yourself through stories, design, image,
food, or building the world around you."*

E1 Journalism & The Media

E2 Hospitality & Tourism

E3 The Arts — Applied, Visual, Performing & Literary

E4 The Built Environment & Real Estate

Journalism & The Media

The storytellers who inform, investigate, and hold the world accountable.

WHY IT MATTERS

A journalist's investigation can bring down a corrupt deal; a single post can start a movement. In an age of information overload, trained, credible storytellers matter more than ever — and increasingly, they're building their own platforms rather than waiting for a newsroom to hire them.

CAREER	WHAT YOU WOULD ACTUALLY DO
Broadcast Media	Report and produce news and content for TV and radio.
Print Media	Write and edit for newspapers, magazines, and publications.
Digital & Social Media	Build and manage online platforms and audiences.
Blogging	Build an independent voice and audience around your expertise.
Vlogging	Tell stories and build community through video content.
Podcasting	Create long-form audio content and conversation.

Hospitality & Tourism

The industry that turns Kenya's beauty and culture into world-class experiences.

WHY IT MATTERS

Tourism is one of Kenya's largest foreign-exchange earners — every safari, every beach resort, every five-star kitchen is an economy of its own, employing chefs, planners, and destination marketers who make visitors fall in love with the country. Some of these are hands-on trade skills you can start training for immediately through TVET.

CAREER

WHAT YOU WOULD ACTUALLY DO

Gastronomy (Culinary Arts) TVET	Train as a professional chef and food expert.
Event Management	Plan and execute events, from weddings to global conferences.
Destination Marketing	Sell the story of a place to the world.
Conference Management	Run large-scale business and international events.
Tours & Travel	Design and guide unforgettable travel experiences.
Sommelier	Become a certified wine expert and pairing specialist.
Oenology	Study and practice the science of winemaking.

The Arts — Applied, Visual, Performing & Literary

Every form of creative expression — visual, performing, written, and personal styling.

WHY IT MATTERS

Kenyan fashion designers dress international runways, Kenyan musicians top African charts, and Kenyan writers win global literary prizes. The arts are not a 'backup plan' — they are a real, respected career path, and many of these skills are hands-on trades you can begin training in right away.

VISUAL & DESIGN ARTS

CAREER	WHAT YOU WOULD ACTUALLY DO
Fashion & Couture Design	Design and create original clothing and collections.
Graphic Design	Visually communicate ideas across every kind of media.
Interior Design	Shape how spaces look, feel, and function.
Photography	Capture and tell stories through still images.
Videography	Tell stories through moving images and film.
Painting & Sculpture	Create original fine art in two and three dimensions.

PERFORMING ARTS

CAREER	WHAT YOU WOULD ACTUALLY DO
Sound Engineering TVET	Record, mix, and produce professional audio.
DJ Techniques TVET	Curate and mix music for live audiences.
Dance	Perform, choreograph, and teach movement as art.
Drama	Act, direct, and produce for stage and screen.
Music	Perform, compose, and produce music professionally.

LITERARY ARTS

CAREER	WHAT YOU WOULD ACTUALLY DO
Creative Writing	Write fiction, essays, and creative nonfiction.
Poetry	Craft and perform the written and spoken word.
Script-Writing	Write for film, TV, theatre, and stage.

BEAUTY & PERSONAL STYLING ARTS

CAREER	WHAT YOU WOULD ACTUALLY DO
Cosmetology TVET	Train professionally in skincare and beauty treatments.
Hairdressing (Coiffeuring) TVET	Master the art and business of professional hairstyling.
Aesthetics TVET	Specialise in professional skincare and beauty therapy.

ROOM
E4

The Built Environment & Real Estate

The designers, engineers, and planners who build the physical world around us.

WHY IT MATTERS

Every building you've ever walked into started as someone's drawing. As Kenyan cities grow fast, the people who plan them responsibly — architects, engineers, urban planners — are shaping what an entire generation's daily life will look like.

CAREER	WHAT YOU WOULD ACTUALLY DO
Quantity Surveying	Manage the costs and contracts of major construction projects.
Urban Planning	Design how entire cities and towns grow and function.
Architecture	Design buildings that are beautiful, functional, and safe.
Architectural Drafting	Turn design concepts into precise technical drawings.
Interior Architecture	Design the structural and spatial experience of interiors.
Site Engineering	Manage the technical execution of a construction site.
Civil Engineering	Design and build roads, bridges, and public infrastructure.
Structural Engineering	Ensure buildings and structures can safely stand and last.
Building Services Engineering	Design a building's power, water, and climate systems.
Energy Assessment (Buildings)	Evaluate and improve a building's energy efficiency.
Construction Management	Oversee construction projects from design to completion.
Real Estate	Broker, appraise, manage, and develop property.

Keep This Guide.

Whichever rooms you visit on 29 August, come with questions — the best mentorship conversations start with a girl brave enough to ask exactly what she wants to know.

This is more than a programme for the day. It's a map you can return to whenever you're deciding what's next.

Servire Est Regnare

TO SERVE IS TO REIGN
